The Sub-Fund is suitable for investors considering an investment in assets of both a conservative and risky nature. Although potential losses of the Sub-Fund are expected to be moderate, the investor should however be able to accept temporary losses.

Risk and reward profile

This indicator is based on an estimate of the historic volatility calculated from weekly performances of the rest of the sub-fund's Share Classes over a period of four years and six months supplemented with the historic volatility of the benchmark over the last five years. This Share Class is classified in category 4 because the Sub-Fund mainly invests in convertible bonds dealt on the international markets.

Further risks that are essential for the Sub-Fund are not adequately covered by the indicator above: since the Sub-Fund invests in bonds and debt securities issued by the companies, it is therefore exposed to credit risk linked to securities held by the Sub-Fund in case of an issuer's downgrading or default.

Moreover, the Sub-Fund is exposed to risks linked to the use of derivative instruments, in particular use futures on indices and interest rate.

Furthermore, the value of your investment may fall as well as rise and you may get back less than you originally invested.

The historical data used for calculating the risk and profit category cannot serve as a reliable indicator of the future risk profile.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

The lowest risk category does not mean a free-risk investment.

There is no capital guarantee and no capital protection.

You can find further information concerning the risk and reward profile on the SICAV's prospectus available at OFI LUX or on the Internet site of the Principal Distributor at www.ofilux.lu.
