

MANAGEMENT DIRECTION

Management objective

The objective of the UCITS is to achieve performance above that of its benchmark, by investing the portfolio in European convertible bonds.

Benchmark

The benchmark is the Thomson Reuters Europe Focus Hedged Convertible Bond Index (EUR), calculated with coupons reinvested.

This index is calculated by MACE Advisers, a company in the Thomson Reuters group. It brings together European convertibles satisfying minimum liquidity and balanced (share/bond) risk profile criteria. It is available at <http://thomsonreuters.com/> and via Bloomberg: Code UCBIFX21 Index.

However, the objective of the SICAV is not to reproduce, in one way or another, the performance of this index.

Management strategy

As a minimum, 60% of the net assets of the SICAV are invested in European convertible bonds. It will be exposed continuously on one or more European interest rate markets. In addition, the portfolio shall be invested, on a secondary basis, in shares which originate solely from the conversion of bond issues into equity.

Construction and management of the portfolio use three sources of value added: economic and monetary analysis, financial analysis of companies (stock picking and credit picking) and technical analysis (issue prospectuses, volatility) of products. The investment strategy does not envisage any allocation by small / medium / large capitalisations.

The sector-based and geographic allocations of the portfolio stem from a comparative analysis between those on the European share market and those of convertible bond indices. However, it evolves on a discretionary basis, depending on the manager's expectations.

The fundamental analysis of shares and fundamental analysis of credit, along with the analysis of the technical particularities of the products (volatility/convexity, special situations, primary market, issue prospectuses) result in a selection of the underlying assets and subsequently of the products making up the portfolio.

Global exposure to the share and interest rate market is adjusted with futures contracts and share and interest rate index options.

The range of sensitivity to interest rates, within which the UCITS is managed, is between 0 and 5.

The manager complements his study by analysis of extra-financial criteria in order to favour a "Socially Responsible Investment" (SRI) selection of companies in the portfolio.

This study is carried out taking into account Environmental, Social and Governance elements, namely:

- the Environmental dimension: direct or indirect impact of the issuer's activity on the environment: climate change, natural resources, project financing, toxic waste, green products;
- the Social dimension: direct or indirect impact of the issuer's activity on stakeholders: employees, customers, suppliers and civil society, by reference to universal values (notably: human rights, international work standards, environmental impact, prevention of corruption, etc.);
- the Governance dimension: processes as a whole, regulations, laws and institutions influencing the way the company is directed, administered and controlled.

Based on the sector-based reference for key issues, an ESG Score is calculated per issuer, which includes, first, the key issue scores (with a weighting of 70% for Environmental and Social issues and 30% for Governance), any penalties associated with controversies not yet integrated in the scores for key issues and any bonuses associated with analysis of the key issues. This ESG score is calculated out of 1.

The eligible investment universe is defined by the limitation of companies presenting the lowest SRI Scores (established by our SRI Division) of all issuers covered by an ESG analysis (international private issuers, i.e. approximately 2,600 currently):

Maximum weighting of issuers by SRI category:

- Under supervision: 10%;
- Uncertain + Under supervision: 25%;
- Followers + Uncertain + Under supervision: 50%.

The mutual fund adheres to the AFG Eurosif Transparency Code for SRI funds open to the public, available at www.ofi-am.fr.

No particular limit in terms of rating or in terms of duration has been introduced.

The UCITS may use financial contracts, traded on French and foreign regulated and organised and/or OTC markets, in order to cover or expose the portfolio, notably to share and interest rate risks, through the use of instruments such as futures contracts or options.

The manager may take positions with a view to hedging against the credit risk associated with the bonds held in the portfolio.

The manager is also authorised to carry out transactions hedging against the foreign exchange risk associated with holding securities denominated in currencies other than the euro (maximum currency exposure of 5%).

Risk profile

Investors are therefore mainly exposed to the risks below, this list not being exhaustive.

Capital loss risk

The investor is advised that the performance of the UCITS might not conform to their objectives and that their capital might not be returned in full, the UCITS not benefiting from any guarantee or protection of capital invested.

Risk associated with the holding of convertible bonds

The UCITS is exposed to convertible bonds; these may show a residual share sensitivity and experience marked fluctuations linked to changes in the prices of the underlying shares. The investor's attention is drawn to the fact that the net asset value of the UCITS will drop in the case of an unfavourable change.

Share risk

The UCITS is invested or exposed on one or more share markets which may experience marked variations. The investor's attention is drawn to the fact that variations in the price of the portfolio assets and/or the market risk might result in a significant reduction in the net asset value of the UCITS.

Interest rate risk

Because of its composition, the UCITS may be subject to an interest rate risk. This risk results from the fact that, in general, the price of debt securities and bonds falls when rates rise. The net asset value may therefore drop if interest rates rise.

Credit risk

In the case of downgrading of private or public issuers, or their defaulting, the value of bonds may fall. The occurrence of this risk may result in a drop in the net asset value of the SICAV.

Counterparty risk

This is the risk associated with use by the UCITS of futures, OTC instruments and/or resorting to acquisitions and temporary purchase and sale of securities. These transactions concluded with one or more eligible counterparties potentially expose the UCITS to a risk of one of these counterparties defaulting and possibly resulting in failure to pay.

High Yield risk

This is the credit risk applied to what are known as "speculative" securities which present probabilities of default higher than those of Investment Grade securities. In return, they offer higher levels of return, but can significantly reduce the net asset value of the UCITS.

Foreign exchange risk

This is the risk of foreign currency variation affecting the value of the stocks held by the UCITS. The investor's attention is drawn to the fact that the net asset value of the UCITS will drop in the case of an unfavourable change in the foreign currency rate other than the euro.

Risk associated with holding small capitalisations

On account of its management direction, the SICAV may be exposed to small and medium capitalisations which, taking account of their specific characteristics, may present a liquidity risk. On account of the limited size of the market, the evolution of these stocks is more marked in an upward direction than a downward direction and may generate marked fluctuations in the net asset value.

And, secondarily, to the following risks:

Risk associated with investment in certain UCITS

The UCITS may invest in a certain number of UCITS or investment funds (FCPR, FCIMT, FCPI, alternative management UCITS) for which there is a risk associated with alternative management (that is, management decorrelated from any market index). The UCITS is exposed to a liquidity risk or a risk of fluctuation in its net asset value by investing in this type of UCITS or investment.

CHANGE(S) MADE DURING CURRENT HALF-YEAR

Nil.

CHANGE(S) MADE DURING PREVIOUS HALF-YEAR

RC shares, launched on 26 December 2017, were abandoned on 3 May 2018.

Then, RF shares, created on 25 January 2018, were abandoned on 9 March 2018.

FUTURE CHANGE(S)

As of 1 April 2019, the undertakings designated for the centralisation of subscriptions and redemptions will be OFI ASSET MANAGEMENT for purely registered units and CACEIS BANK for managed bearer and registered units.

INFORMATION RELATING TO TRANSPARENCY OF SECURITIES FINANCING TRANSACTIONS AND RE-USE

Between 28 September 2018 and 29 March 2019, the SICAV did not perform any securities financing transactions or total return swaps.
